

SUMMARY

Working in tech companies since 2017, I succeed to grow my programming skills in different areas. I participate in projects which developing website different platform. My practical experience in different languages which i have mentioned in my skills part and I am motivated to mastering those skills and to enrich my knowledge with a new one.

SKILLS AND TECHNOLOGIES

- Wordpress
- Woocommerce
- Core Php
- Moodle
- Laravel, Yii2, CI
- Rest API
- GIT
- Swagger
- MYSQL
- Jquery, Ajax

EXPERIENCE

Sr. developer
Toxsl Technology, Mohali May 2020

- 1. Creating RESTful APIs in WordPress:** To create RESTful APIs in WordPress, create the REST API that is built into WordPress. Extend it by creating custom endpoints using plugins or theme functions. The following are the general steps:
 - Define the data to expose via the API.
 - Create custom endpoints using WordPress hooks and functions.
 - Implement authentication and authorization if needed.
 - Test API endpoints.
- 2. Developing Your Own Plugin and Modules in Different Technologies:** Create custom plugins or modules in various technologies like PHP, JavaScript, or any other programming language. Ensure they integrate well with WordPress site. The exact steps will depend on the technology .
- 3. Integrating Swagger for RESTful APIs:** Using the Swagger UI to document RESTful APIs. Here's a high-level process:
 - Install and configure the Swagger UI within WordPress site.
 - Create API documentation using the Swagger specification.
 - Generate Swagger documentation for APIs.
 - Make it accessible through the Swagger UI.
- 4. Integrating Different Payment Gateways:** Integrating payment gateways in WordPress involves several steps:
 - Choose a payment gateway that suits and needs.
 - Install and configure a payment gateway plugin compatible with WordPress.
 - Set up gateway's credentials and configure payment options.
 - Test the payment process to ensure it works smoothly.
- 5. Integrating Docker for Microsites:** To create microsites with Docker, use containers for isolated environments. Here are the general steps:
 - Set up a Docker environment on your server.
 - Create Docker images for each microsite.
 - Deploy and manage these containers.
 - Ensure proper networking and security configurations.
- 6. Creating an LMS Project on Moodle CMS:** To create an LMS project using

Moodle:

- Install Moodle on server.
- Customize the LMS appearance, if necessary.
- Create courses and content.
- Manage user accounts and enrollments.
- Configure assessment and grading.
- Integrate any additional plugins or modules.
- Test the functionality thoroughly.

Jr. php developer

Apptunix,Mohali Jul 2017 - Nov 2019 *Jul 2017 - May 2019*

1. WordPress Website Development:

- Choose a hosting provider and set up WordPress environment.
- Select and install a WordPress theme that matches your project's design requirements.
- Customize the theme to specific needs, including branding and layout adjustments.
- Create essential pages like the homepage, about, services, contact, etc.
- Optimize site for SEO by using plugins like Yoast SEO.
- Implement responsive design to ensure website works well on various devices.

2. Integrate Zoho Forms:

- Create an account with Zoho Forms.
- Design forms using the Zoho Forms builder.
- Obtain the embed code for forms.
- Insert the embed code into the relevant pages or posts on WordPress site.
- Ensure the forms work correctly and test the submission process.

3. Create Custom Plugins:

- Define the functionality you want to achieve with custom plugins.
- Develop custom plugins using PHP and WordPress hooks.
- Ensure proper security measures are implemented to protect the website.
- Test the plugins to ensure they work as intended and do not conflict with other plugins or themes.
- Debug and refine your plugins.

PROJECTS

Job Responsibilities:

• Team Management:

- Led and supervised a team of 15 responsible for.
- Provided clear direction, set goals, and conducted regular performance evaluations to ensure team productivity and growth.
- Mentored team members, fostering a collaborative and results-driven work environment.
- Collaborated with HR to recruit, train, and onboard new team members.

• Project Delivery:

- Managed the end-to-end project lifecycle, from initiation to completion, ensuring adherence to timelines and budgets.
- Oversaw project planning, resource allocation, and risk assessment, resulting in on-time and on-budget project delivery.
- Established and monitored project milestones, identifying and resolving potential bottlenecks to keep projects on track.
- Collaborated with cross-functional teams to ensure project requirements were met and communicated project progress to stakeholders.

• Issue Resolution:

- Acted as the point of contact for team members, addressing their concerns and issues promptly and professionally.
- Implemented effective conflict resolution strategies to maintain a positive team

dynamic.
